THE NATIONAL SAMPLE SURVEY

FOURTH ROUND : APRIL–SEPTEMBER 1952

NUMBER 18

TABLES WITH NOTES ON CONSUMER EXPENDITURE

FOREWORD

1. Expenditure on household consumption forms an important part of the socio-economic enquiries of the National Sample Survey (NSS). A general account of the consumer expenditure of households in rural areas was presented for the first time in India in December 1952 in the NSS General Report No. 1, based on materials collected during the First Round (October 1950–March 1951) of the Survey. Tables with Notes on the same subject for the Second Round of the Survey (April–June 1951) were published in December 1953, and those for the Third Round (August–November 1951) in January 1954. The Tables given in this volume are based on the Fourth Round of the Survey (April–September 1952).

2. In this report information on the pattern of consumption at various levels of living is given for the first time for both rural and urban areas. The sample households were classified by their total monthly expenditure which gives only a rough idea of the level of living because no allowance is made for the size (i.e. the number of persons) in the household. In a subsequent report on the pattern of consumer expenditure the analysis has been based on classification of households by the total expenditure per person per 30 days. This type of information reveals the disparities in the level of consumption and has special significance in a country like India.

3. The data were collected by the Directorate of National Sample Survey and processed in the Indian Statistical Institute. The report has been prepared by Deb Kumar Bose, Jiban Krishna Aikat and Debabrata Roy.

THE NATIONAL SAMPLE SURVEY

FOURTH ROUND : APRIL–SEPTEMBER 1952

NUMBER 18

TABLES WITH NOTES ON CONSUMER EXPENDITURE

*This Report on Sample Survey on Consumer Expenditure was prepared by the Indian Statistical Institute, Calcutta and is being published in the form in which it was submitted to the Government of India. The views contained in this report are not necessarily those of the Government of India.**

Chapter One

THE SCOPE AND DESIGN OF THE SURVEY

1.1. The geographical coverage of the fourth round of the survey remained the same as in the third round i.e. the whole of India excluding Jammu and Kashmir, Andaman and Nicobar Islands and some parts of Assam.

1.2. In this round, a total of 17,104 sample households from 946 sample villages and a total of 7768 sample households from 406 sample blocks were selected for survey. This report on consumer expenditure is, however, based on data collected from 12,422 sample households of which 8545 were selected from 946 sample villages, 3183 from 49 sample towns and cities and 694 from the four big cities of Calcutta, Bombay, Delhi and Madras.

1.3. As up-to-date information on tehsils was available from the 1951 Population Census, the sampling design for the rural areas in the fourth round of the survey was changed from that for the earlier rounds for improvements. In earlier rounds, the sample households were selected in two stages: villages in the first stage after suitable stratification, and households in the second. For the first stage sampling frame, however, only the old lists of villages of the 1941 Population Census could be used. As soon as the 1951 Census figures were available the design was changed. In order not to get delayed for complete village lists, the sampling was done in three stages. Sample tehsils were selected in the first stage, villages in the second stage and households in the final stage. Tehsils and villages were suitably stratified before selection. For both tehsils and villages, the probability of selection was proportional to their population size or areas and the selection was done with replacement.

---

* The first draft report (No. **D. 13**) was submitted to the Government of India in October 1956 and the revised draft was submitted in June 1958.

1.4. The sampling design for the urban areas was not, however, changed from the third round as required information was not available. The details in this regard therefore remain the same as described in para 1.3 of Chapter One of NSS Report No. 3.

1.5. The sampling design for the fourth round of the survey has been dealt with in detail in Appendix II

1.6. The general practice of using two independent interpenetrating sub-samples for collection of data in NSS surveys was continued in the fourth round also. The two independent but equally valid estimates are useful for information on margin of uncertainty. The technique also provides a measure for control at different stages of work. The combined estimates by merging the two sub-samples are also presented besides the estimates by corresponding sub-samples.

1.7. Considerable importance is attached to the study of changes in the pattern of consumption with those in the total consumer expenditure. Detailed tabulation by levels of monthly household consumer expenditure was undertaken for the first time in this round of the survey. The data have been classified by monthly household expenditure groups in most of the tables in this report.

1.8. Another important feature of the fourth round was the use of two sets of questionnaires with two different reference periods, a week and a month for a number of items, which were otherwise identical. This was done with a view to studying the effects on estimates when the same questions were asked with different reference periods. The estimates prepared from questionnaires with a particular reference period (say a week) are found to differ from those prepared from a different reference period (say a month). This might be due to several factors e.g., lapses of memory on the part of the informant, the system of purchase (daily, weekly, monthly or otherwise) of the household, over or under-statement by the respondent etc. The sample households in each selected village were divided into two equal groups and questionnaires with a week as the reference period were completed from one group and those with a month as the reference period, from the other group. The figures of the present report are based on particulars collected from the sample households belonging to the latter group e.g., those with a month as the reference period. The figures for the other set will be published in a later report.

Chapter Two

THE PATTERN OF CONSUMER EXPENDITURE IN THE FIRST, SECOND, THIRD AND FOURTH ROUNDS

2.1. The expenditure on different items of consumption as percentages of total consumer expenditure in rural areas in the different rounds of the survey are shown in Table (2.1). The figures for the four rounds, tabulated in columns (2) to (5) respectively present a comparative picture of the pattern of consumer expenditure over the period of July 1949 to September 1952. The differences between the percentages of expenditures of the third and the fourth rounds are shown in column (6).

2.2. The percentages of expenditures on all food items in the first three rounds were about the same but in the fourth round there has been a fall. While there is a small rise in the percentage for foodgrains, the proportion for edible oil declined by more than one per cent and for spices and sugar by nearly one per cent. The comparison in the price for the two periods disclosed that there was a downward shift in the price levels for all the items in varying measures. The change in prices of cereals was found to be the least and this probably is the reason why percentage expenditure on foodgrains shows a little rise. As we pass on from second to third round, there is a steep fall in the percentage of fruits which may be due to seasonal factors. In the fourth round, however, which covers the entire season of the two earlier rounds, the percentage figure seems to balance this seasonal discrepancy. As for items other than food, the differences are more than one per cent for fuel and light, clothing and services, and for the rest of the items the differences are less than one per cent.

2.3. The survey in the first two rounds was confined to rural areas only. Data for urban areas are available for comparison between rounds from the third round onwards. The percentage expenditures in urban areas for the third and the fourth rounds are given in columns (2) and (3) of Table (2.2). The differences are broadly similar in nature to those observed in the rural areas except that the effect of price changes is a little more pronounced.

Actual level of household expenditure

2.4. The expenditure per household[1] in rural areas for a period of 90 days was Rs. 286 in the first round. The corresponding figures in the second and third rounds were Rs. 391 and Rs. 373 respectively. The figure for the fourth round calculated for a period of 90 days was Rs. 322. It was explained in NSS Report No. 2 that the use of one year as the reference period in the first round might have led to

[1] The consumer expenditure per household has been obtained by dividing the estimated total consumer expenditure by the estimated number of households.

an under-estimation of certain items. The fall in the expenditure per household between the third and fourth rounds can reasonably be ascribed to the fall in price level between the two periods.

36. number of sample households	1690	3877	—

CONSUMER EXPENDITURE IN VILLAGES, TOWNS AND CITIES

2.5. A comparison between the pattern of consumer expenditures per person[1] per month for villages, towns, cities and the country as a whole can be made from Table (2.3). The figures for India as a whole have been arrived at after suitably weighting them by the relative proportion of estimated population in the three sectors.

2.6. The consumer expenditure includes imputed values in cases of supplies obtained in kind, the imputation being based on the prevailing local prices. The consumer expenditure per person per month during April–September 1952 amounted to Rs.21.44, Rs.28.02 and Rs.43.15 for villages, towns and cities respectively. The corresponding figures for the third round of the survey (August–November 1951) were Rs. 24.22, Rs. 31.55 and Rs. 54.82 respectively. The average expenditure per person for the country as a whole also registered a decline to Rs. 22.80 in this round compared with Rs. 25.70 per month in the third round.

2.7. In the villages a little above 63 per cent of total expenditure went for food; in the towns the proportion was 51 per cent and in the four cities 44 per cent.

2.8. The same tendency towards declining proportion is noticed more sharply for foodgrains and pulses. Although the proportions for salt decreased similarly, the expenditure on salt per person remained the same in all the three sectors. The per capita expenditure on fuel and light, clothing, education, services, rent and taxes increased appreciably from villages through towns to cities.

RELATIVE EXPENDITURE IN RURAL AND URBAN AREAS

2.9. Table (2.4) bears the comparative pattern of consumer expenditure in rural and urban areas. Main difference in the pattern of consumption for the two sectors is observed in the proportion of expenditure devoted to all food items. It is 63 per cent in rural areas and 50 per cent in urban areas. Expenditure on foodgrains accounts for 41 per cent of the total in rural areas and 21 per cent in urban areas; one is nearly double the other. The percentages for milk, milk products, meat, egg, fish and refreshments in the urban areas are greater than the corresponding percentages for rural areas. Within the non-food group of items the percentages for non-food items were generally higher in urban areas. Ceremonials form the only item within the non-food groups with regard to which the percentage for the rural areas was higher than that for the urban areas.

2.10. It is interesting to note that while the per capita expenditures on all items are Rs. 21 and Rs. 30 in rural and urban areas respectively, the same on all food items are very close to each other, i.e. Rs. 14 and Rs. 15. The per capita expenditures on non-food items for the two sectors are Rs. 8 and Rs. 15 respectively.

---

[1] The consumer expenditure per person has been obtained by dividing the estimated total consumer expenditure by the estimated number of persons irrespective of age and sex.

2.11. Among the non-food group of items maximum difference in expenditure between rural and urban sectors is observed in the case of rents and taxes. An average urban consumer pays on rents and taxes about five times more than his rural counterpart. The urban consumer also spends considerably more than the rural consumer on clothing, education, amusement and conveyances. Small differences are observed between the per capita expenditures in the two sectors on tobacco, fuel and light and domestic utensils.

TABLE (2.3): CONSUMER EXPENDITURE IN RUPEES PER PERSON PER MONTH FOR CITIES, TOWNS, VILLAGES AND INDIA

items	rupees per person per month				percentage of total expenditure

32. non-food total	39.63	68.73	7.90	14.91	36.85	50.17
33. total	107.62	137.54	21.44	29.72	100.00	100.00
34. number of sample households	8545	3877	8545	3877	8545	3877
35. average household size	5.01	4.62	5.01	4.62	5.01	4.62

2.12. The relative difference in the total expenditures per household for the rural and urban areas is smaller than the relative difference in their per capita expenditures. This is because the average household size is smaller in the urban areas.

Consumer expenditure in rural area by population zones

2.13. Monthly expenditures in rural areas for different population zones are shown per household, per capita and as expressed in percentage expenditures in Tables (2.5), (2.6) and (2.7) respectively. Expenditure per household as well as per capita is the highest in the North-West zone, viz., Rs. 147 and Rs. 28 respectively. At the other end, Central India has the lowest per household and per capita expenditures namely Rs. 77 and Rs. 17. The all-India averages are Rs. 108 per household and Rs. 21 per person.

2.14. Percentage distributions of expenditure on different items reveal some variation in the pattern of consumption in different zones which have been shown in Table (2.7). The variation for foodgrains is wide. The percentage is the highest for East India, 44 per cent, as compared with the lowest figure for West India and North-West India which is round about 34 per cent. For milk and milk products the figure is the highest for North-West India, namely 14 per cent, as compared with the figure for East and South India, namely 4 per cent, which is the lowest. Zonal differences in proportionate expenditure on other items, though interesting, are not so wide.

Proportion of consumer expenditure not entering the monetized sector of our economy

2.15. While collecting the consumption figures from a household, information on the amount of cash purchase made during the reference period was also obtained independently. It was assumed for the purpose of deriving a broad measure of non-monetization of the economy, that the amount obtained through cash purchase was completely consumed during the reference period. The difference between the total consumption and the total cash purchase would, therefore, give us the part of consumer expenditure of household that did not enter into the monetized sector. The latter would, of course, include the part of home produce consumed directly by the household.

2.16. The proportions of imputed value of the consumption items obtained in kind to the value of total consumption of those items by the household in third and fourth rounds of the survey have been presented in Table (2.8). The table shows the positions of rural and urban areas separately and also the combined positions for the country as a whole. The figure for the third round, however, are not strictly comparable with those for the current round since there has been some change in the procedure of collection of information in this regard in the current round. Nevertheless, the non-monetized proportion over all items of expenditure for rural and urban areas taken together came to about 37 per cent in both the third and the fourth rounds.

TABLE (2.8): PROPORTION OF IMPUTED VALUE OF THE PART OBTAINED IN KIND TO VALUE OF TOTAL CONSUMPTION OF HOUSEHOLDS IN THIRD AND FOURTH ROUNDS

all India

items	rural		urban		rural and urban	
	third round August-Nov., '51	fourth round April-Sept., '52	third round August-Nov., '51	fourth round April-Sept., '52	third round August-Nov., '51	fourth round April-Sept., '52
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. foodgrains	64.8	72.6	22.4	21.3	60.1	66.3
2. pulses	60.9	66.5	23.3	12.6	54.8	58.3
3. edible oil	14.7	23.3	11.9	4.4	14.4	18.4
4. vegetables	38.8	40.2	3.7	5.3	29.5	30.6
5. milk and milk products	70.3	70.5	17.3	20.3	57.3	57.2
6. meat, egg and fish	31.0	28.8	6.0	7.5	23.9	22.2
7. fruits	35.0	46.2	11.9	11.1	26.9	35.0
8. refreshments	17.1	9.0	11.3	6.8	14.8	8.0
9. spices, salt and sugar	23.5	23.7	22.0	9.1	23.4	20.7
10. pan (betel leaves)	9.5	7.8	0.0	3.7	4.0	6.5
11. tobacco	23.0	17.9	5.9	3.0	19.4	14.8
12. intoxicants	21.4	29.9	0.0	3.4	18.8	25.8
13. fuel and light	77.7	70.2	36.2	24.1	69.8	60.2
14. all other items	—	—	—	—	—	—
15. all items	43.1	44.3	11.4	9.2	36.9	36.8

2.17. It will be seen that the proportion of consumer expenditure which did not enter into the monetized sector varied widely from item to item. The proportions for all items were 44 per cent and 9 per cent respectively for the two sectors in the fourth round. The results for the third round also appeared to be similar. They were 43 per cent and 11 per cent respectively. In rural areas, the proportions were high for foodgrains, pulses, milk and milk products, and fuel and light. In urban areas also, as compared with other items the proportions for the same items were high.

2.18. The extent of supplies which were obtained in kind was naturally very high in rural areas as compared with urban areas.

CHAPTER THREE

PATTERN OF CONSUMPTION BY LEVELS OF HOUSEHOLD EXPENDITURE

3.1. The pattern of consumption in different levels of monthly household expenditure and other related figures have been shown in this chapter. The particulars of the earlier rounds were not analysed along this line and the tabulations are given in this report for the first time.

SHARE OF TOTAL CONSUMER EXPENDITURE BY LEVELS OF EXPENDITURE

3.2. Table (3.1) shows percentage distribution of households and population by levels of household expenditure per month separately for rural and urban areas. In addition, it also shows the share of total expenditures corresponding to the households and populations distributed in the different levels.

TABLE (3.1): PERCENTAGE DISTRIBUTION OF HOUSEHOLDS, POPULATION AND CONSUMER EXPENDITURE BY LEVELS OF MONTHLY HOUSEHOLD CONSUMER EXPENDITURE IN RURAL AND URBAN AREAS OF INDIA

	household expenditure per month in rupees	percentage distribution					
		rural			urban		
		household	population	share of total expenditure	household	population	share of total expenditure
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
1.	1-50	29.15	18.51	8.93	21.21	10.86	5.22
2.	51-100	33.83	31.21	23.16	32.57	27.85	17.15
3.	101-150	17.70	19.99	20.26	18.46	19.90	16.29
4.	151-300	14.79	21.26	27.91	18.80	25.47	27.60
5.	301-500	3.38	6.21	11.67	5.82	9.58	15.58
6.	over 500	1.15	2.82	8.07	3.14	6.34	18.16
7.	all levels	100.00	100.00	100.00	100.00	100.00	100.00

3.3. The percentage distribution of the households is shown in column (2) for the rural areas and in column (5) for the urban areas. As the distribution of population was somewhat different from that of the households, the average size of households varied in the different expenditure levels. The proportions for the population are shown in column (3) for the rural areas and in column (6) for the urban areas. The greater concentration of population in lower expenditure levels in rural areas as

compared with the distribution of population in urban areas clearly shows the poverty of the country-side. About 50 per cent of the people in rural areas were living in households which could spend up to Rs. 100 a month. This proportion for the urban areas was about 39 per cent. From the other end, it will be seen that about 30 per cent of the people living in rural households could spend more than Rs. 150 a month while this proportion for the urban areas was about 41 per cent. Only about 3 per cent of the people in rural areas were spending over Rs.500 a month compared with about 6 per cent for the urban areas.

3.4. The share of total consumer expenditure by the different levels for the rural and urban areas have been shown in columns (4) and (7) respectively. In the lowest level namely, Rs. 1—50, the expenditures of about 19 per cent of population add up to only 9 per cent of the total expenditure in the rural areas. On the other hand, for levels over Rs. 300, the expenditures of 9 per cent of population add up to about 20 per cent of total consumer expenditure of the rural areas. The inequality was greater in the urban areas. In the lowest level, the expenditures of about 11 per cent of population amount to 5 per cent of total urban consumer expenditure and for levels beyond Rs. 300, the expenditures of about 16 per cent of population account for about 34 per cent of the total expenditure.

PATTERN OF CONSUMPTION BY LEVELS OF HOUSEHOLD EXPENDITURE

3.5. The patterns of consumption at different levels of household expenditures are presented in the Tables (3.2) to (3.5). Tables (3.2) and (3.3) show, for rural and urban areas respectively, the expenditures on different items of consumption expressed as percentages of total consumer expenditures arranged by levels of monthly household consumer expenditure and also for all levels taken together. Tables (3.4) and (3.5) show, for rural and urban areas respectively, expenditures on different items of consumption in rupees per person per month by similarly arranged levels and also for all levels taken together.

3.6. As it will be seen from Tables (3.2) and (3.3), the decrease in the ratio of expenditure on food items to that of all items was found to be continuous with the rise in the level of the monthly household expenditures. It is particularly so in the case of foodgrains. The ratio for milk and milk products shows an opposite tendency except in the highest expenditure level. The estimates for higher expenditure levels, are presumably subject to wider margins of error than those for lower groups because of smaller sample size.

3.7. The change in expenditure per person, and hence also of demand, for different items with the change in monthly household expenditure levels indicate, as will be seen from Tables (3.4) and (3.5), that the expenses for food items, particularly foodgrains, salt and spices, did not increase proportionately with the increase in the total expenditure. It was also inelastic for fuel and light and clothing. The expenses (and hence also demand) for milk and milk products

and services were highly elastic, and that for most of the non-food items were also similar. Proportionate expenditure on items like services, education and medicine broadly maintained uniform increase with rising expenditure level. Expenditure on sundry equipments and ornaments are remarkably high in the highest expenditure level.

TABLE (3.2): EXPENDITURE ON DIFFERENT ITEMS OF CONSUMPTION AS PERCENTAGES OF TOTAL CONSUMER EXPENDITURE ARRANGED BY LEVELS OF MONTHLY HOUSEHOLD CONSUMER EXPENDITURE IN RURAL AREAS

all India (rural)

items	expenditure level in rupees						all expenditure levels

32. non-food total	4.74	7.11	10.81	16.18	26.94	47.20	93.71	14.91
33. total	13.56	18.28	24.30	32.61	48.38	74.79	127.55	29.72
34. number of sample households	762	1237	731	770	244	110	23	3877
35. average household size	2.36	3.95	4.98	6.26	7.60	9.00	10.76	4.62

3.8. The rural-urban differences were sharply focussed in the expenditure proportions for ceremonials and rents and taxes. The proportion for ceremonials increased with higher expenditure levels in both the areas. It is also interesting to note that the proportion for ceremonials in the rural areas was higher than that for the urban areas and this was consistently maintained so for all the expenditure levels. This might suggest the importance of ceremonials in the pattern of rural life of our country.

3.9. The proportion of rents and taxes has an important feature to note. The proportion rose more steeply in the urban areas than in the rural areas. The divergence between the proportions for the two areas fast widened with the increase in expenditure levels. The contrast was brought into sharp relief in the upper expenditure brackets.

3.10. The disparity in per capita expenditure between the different expenditure levels in rural and urban sectors was remarkably wide. The figures for all the levels in the urban sector were higher than the corresponding figures for the rural sector. The all-class monthly average in the urban sector was Rs.29.72 as against Rs.21.44 for the rural sector. The per capita expenditure on foodgrains in rural areas increases rapidly with the increase in the expenditure level while in the urban areas the figures increase at a much slower rate and ranges between Rs.5 and Rs.7 only. This can probably be explained by the system of rationing followed in urban areas during the reference period.

Chapter Four

DESCRIPTION OF THE TABLES

4.1. The tables presented in Appendix I cover detailed information by different items of consumption. The figures given in two places of decimal are for purposes of arithmetic calculations and do not suggest accuracy to that degree.

4.2. For the rural sector, the estimates are given for each of the sixteen larger States and other smaller States[1] grouped together, for each of the six Population Zones[2] and for all India.

4.3. In the urban sector the samples were drawn after stratifying the towns only by sizes (1941 Census Population) and not by geographical locations. The estimates have been arranged by towns of three different population sizes and by cities. The total position of the urban areas as a whole has also been shown. A list of sample towns, arranged by population sizes, is given below. In addition, the four cities of Calcutta, Bombay, Delhi and Madras were also covered in the survey.

(1) Towns with Population below 15,000

Town	State	Town	State
1. Jind	PEPSU	11. Purna	Hyderabad
2. Jahangirabad	Uttar Pradesh	12. Peddapalli	Hyderabad
3. Khair	Uttar Pradesh	13. Colachal	Travancore-Cochin
4. Allahabad Cantonment	Uttar Pradesh	14. Lathi	Saurashtra
5. Saharanpur	Uttar Pradesh		
6. Seraikela	Bihar	15. Mangalwadhe	Bombay
7. Amalnapuram	Madras	16. Shigali	Bombay
8. Surandai	Madras	17. Anmori	Madhya Pradesh
9. Pannamaravatho	Madras	18. Balaghat	Madhya Pradesh
10. Pallikonda	Madras	19. Joynagar	West Bengal

[1] States of Tripura, Manipur, Coorg, Kutch, Vindhya Pradesh, Bhopal, Ajmer, Delhi and Himachal Pradesh.

[2] The States have been arranged into six Population Zones on the lines of a memorandum issued in 1951 from the Office of the Registrar-General, Ministry of Home Affairs, Government of India. The Zones are:

Population Zones	States
1. North India	Uttar Pradesh
2. East India	Bihar, Orissa, West Bengal, Assam, Manipur, Tripura, (Andaman and Nicobar Islands and Sikkim omitted from this survey)
3. South India	Madras, Mysore, Travancore-Cochin, Coorg
4. West India	Bombay, Saurashtra, Kutch
5. Central India	Madhya Pradesh, Madhya Bharat, Hyderabad, Bhopal, Vindhya Pradesh
6. North-West India	Rajasthan, PEPSU, Ajmer, Delhi, Punjab, Bilaspur, Himachal Pradesh (Jammu and Kashmir omitted from this survey)

(2) Towns with Population from 15,000 to below 50,000

	Town	State		Town	State
1.	Rewari	Punjab	9.	Udipi	Madras
2.	Narnaul	PEPSU	10.	Bodhan	Hyderabad
3.	Dibrugarh	Assam	11.	Thiruvalla	Travancore-Cochin
4.	Azamgarh	Uttar Pradesh			
5.	Periyakulam	Madras	12.	Amalner	Bombay
6.	Gobichetti-Palayan	Madras	13.	Malegaon	Bombay
7.	Tindivaram	Madras	14.	Naihati	West Bengal
8.	Kallidaikurichi	Madras	15.	Suri	West Begnal

(3) Towns with Population 50,000 and above

	Town	State		Town	State
1.	Kanpur	Uttar Pradesh	9.	Hyderabad	Hyderabad
2.	Shahjahanpur	Uttar Pradesh	10.	Trivandrum	Travancore-Cochin
3.	Lucknow	Uttar Pradesh	11.	Trichur	Travancore-Cochin
4.	Kakinada	Madras			
5.	Tiruchirapalli	Madras	12.	Ajmer	Ajmer
6.	Coimbatore	Madras	13.	Ahmedabad	Bombay
7.	Nellore	Madras	14.	Jubbulpur	Madhya Pradesh
8.	Aurangabad	Hyderabad	15.	Howrah	West Bengal

4.4. The estimates have been arranged in the tables by classes of expenditure level in rupees per month in the following manner:

Expenditure level in rupees

	rural	urban
1.	1 - 50	1 - 50
2.	51 - 100	51 - 100
3.	101 - 150	101 - 150
4.	151 - 300	151 - 300
5.	301 - 500	301 - 500
6.	501 and above	501 -1000
7.		1001 and above

4.5. The figures in the tables have, further, been distributed under two independent sub-samples, sample 1 and sample 2; figures obtained by combining the two sub-samples are placed side by side for ready comparison. Estimates pooled for all expenditure levels are shown by sub-samples in the last three columns of the tables.

4.6. The items of consumption have been classified into 12 groups of items. The 12 groups have thereafter been merged into two major groups of items, viz., food and non-food. There is an additional line relating to the total of all items.

The 12 groups of items are as follows : (1) foodgrains, (2) milk and milk products, (3) edible oil, (4) meat, egg and fish, (5) sugar, (6) salt, (7) other food, (8) clothing, (9) fuel and light, (10) rent, (11) taxes and (12) miscellaneous.

4.7. The all-India and the zonal tables can be grouped according to the nature of information in the following way :

1. Distribution of sample villages	Table (1)
2. Distribution of sample blocks in urban areas	Table (2)
3. Distribution of sample households, estimated number of households and population, and average household size in rural and urban areas	Tables (3–10)
4. Summary tables of consumer expenditure in rural and urban areas	Tables (11–14)
5. Summary tables of consumer expenditure by population zones in the rural areas	Tables (15–26)
6. Summary tables of consumer expenditure by size of town in urban areas	Tables (27–36)
Rural areas :	
7. Value of consumption of foodgrains	Tables (37 – 38)
8. Value of consumption of milk and milk products	Tables (39 – 40)
9. Value of consumption of edible oil	Tables (41 – 42)
10. Value of consumption of meat, egg and fish	Tables (43 – 44)
11. Value of consumption of sugar	Tables (45 – 46)
12. Value of consumption of salt	Tables (47 – 48)
13. Value of consumption of other food items	Tables (49 – 50)
14. Value of consumption of total food items	Tables (51 – 52)
15. Consumer expenditure on clothing	Tables (53 – 54)
16. Consumer expenditure on fuel and light	Tables (55 – 56)
17. Consumer expenditure on rent	Tables (57 – 58)
18. Consumer expenditure on taxes	Tables (59 – 60)
19. Consumer expenditure on miscellaneous items	Tables (61 – 62)
20. Consumer expenditure on non-food items	Tables (63 – 64)
21. Total consumer expenditure	Tables (65 – 66)
22. Indices of consumer expenditure on foodgrains, all food items, all non-food items and all items	Tables (67 – 70)
Urban areas :	
23. Value of consumption of foodgrains	Tables (71 – 72)
24. Value of consumption of milk and milk products	Tables (73 – 74)
25. Value of consumption of edible oil	Tables (75 – 76)
26. Value of consumption of meat, egg and fish	Tables (77 – 78)
27. Value of consumption of sugar	Tables (79 – 80)
28. Value of consumption of salt	Tables (81 – 82)

29. Value of consumption of other food items	Tables (83 – 84)
30. Value of consumption of total food items	Tables (85 – 86)
31. Consumer expenditure on clothing	Tables (87 – 88)
32. Consumer expenditure on fuel and light	Tables (89 – 90)
33. Consumer expenditure on rent	Tables (91 – 92)
34. Consumer expenditure on taxes	Tables (93 – 94)
35. Consumer expenditure on miscellaneous items	Tables (95 – 96)
36. Consumer expenditure on non-food items	Tables (97 – 98)
37. Total consumer expenditure	Tables (99 –100)
38. Indices of consumer expenditure on foodgrains, all food items, all non-food items and all items	Tables (101 –104)

4.8. The distribution of sample units in rural areas namely, tehsils, villages and households, allotted and surveyed have been shown in Table (1) by population zones with breakdowns by states and half-samples. It was not possible to survey all the allotted number of tehsils, villages and households due to various difficulties e.g., uninhabited or inaccessible nature of the areas, non-response etc. In the whole of rural India, about 1.5 per cent of the allotted villages and 4.5 per cent of the allotted households could not be surveyed. In South India the percentages were the highest, being 7.9 per cent for the villages and 9.8 per cent for the households.

4.9. For urban areas the number of sample units namely towns and cities, blocks and households are given in Table (2) by different size class of towns. In urban India, all the sample blocks were surveyed but 3.1 per cent of allotted households could not be surveyed. Table (3) shows the distribution of sample households from which the data were collected in rural areas by six population zones, namely, North India, East India, South India, West India, Central India and North-West India. The zones have been shown in column (1) of the table. The number of sample tehsils and villages are given, along with their distribution by two sub-samples, in columns (2) to (7). Columns (8) to (28) show the number of sample households under different expenditure levels. Table (7) shows the same distribution for the urban areas. The sample households are arranged by 4 groups of towns and cities by their population sizes, namely, (1) towns with population below 15,000, (2) towns with population from 15,000 to below 50,000, (3) towns with population 50,000 and above and (4) four big cities of Bombay, Calcutta, Delhi and Madras. In columns (2) to (7) of Table (7) are shown the number of sample towns and cities and blocks by sub-samples and columns (8) to (28) follow the arrangement of Table (3).

4.10. Tables (4) and (5) show the percentage distribution of estimated number of households and population by population zones for rural areas. Columns (2) to (7) show the number of sample villages and sample households by sub-samples. The corresponding urban figures are given in Tables (8) and (9). In urban tables the number of sample blocks and sample households are given by sub-samples in

columns (2) to (7). Average number of persons per household for rural and urban areas are similarly arranged in Tables (6) and (10) respectively. Tables (11) to (14) show the consumer expenditure in rupees per household and per person for a period of 30 days for rural and urban areas. The items are given under column (1) and the values are distributed under household expenditure levels by sub-samples under columns (2) to (22). Per household estimates for rural and urban areas are given in Tables (11) and (13) respectively. The corresponding per person estimates are given in Tables (12) and (14) respectively. Consumer expenditures on different items in rupees per household and per person for the rural areas are given separately for the six population zones, in Tables (15) to (26). Per household and per capita estimates are arranged in alternate tables. Similar data for urban areas are given in Tables (27) to (36). The urban data are given separately for the four size classes of towns and cities as described earlier. Tables (27) to (32) and (35) and (36) show per household and per capita values for the four size classes. Tables (33) and (34) show values pooled from the first three size classes.

4.11. The detailed tables of consumption for the rural areas numbering (37)–(66) are arranged by six population zones. The population zones are shown in column (1) of the tables. Columns (2) to (7) show the number of sample villages and sample households by sub-samples. The values of consumption are distributed by sub-samples under six expenditure levels in columns (8) to (25). Columns (26) to (28) show the values pooled for all the expenditure levels by sub-samples. The detailed tables for the urban areas numbering from (71) to (100) are similarly arranged by 4 size classes of towns. Population sizes of towns are shown in column (1), number of sample blocks and sample households in columns (2) to (7), the values of consumption under columns (8) to (28). Columns (29) to (31) show values pooled for all the expenditure levels by sub-samples.

4.12. The value of consumption of the various foodgrains for a period of 30 days in rural areas by population zones is given in Tables (37) and (38). Foodgrains include husked grains of rice, wheat, jowar, bazra, maize, barley, small millets, ragi, gram and other foodgrains. Gram here means Bengal gram only. Other grams have been recorded as other foodgrains or pulses according to the nature of the consumption of the households. Per household and per capita estimates are presented in Tables (37) and (38) respectively. Corresponding data for urban areas are given in Tables (71) and (72).

4.13. The value of consumption of milk and milk products during the reference period is given in Tables (39) and (40) for the rural areas and Tables (73) and (74) for the urban areas. Milk and milk products include milk, ghee, butter, *dahee*, *ghol* (lassi), *khowa* and other milk products.

4.14. Tables (41) and (42) show the value of consumption of edible oil for the rural areas, and Tables (75) and (76) present the same for the urban areas. Edible oil includes mustard oil, coconut oil, gingelly oil (til oil), ground-nut oil, vanaspati, oilseeds and others.

4.15. The values of consumption of meat, egg and fish for rural and urban areas are shown in Tables (43), (44), (77) and (78) respectively.

4.16. The values of consumption of sugar and salt for the rural areas are shown in Tables (45) to (48) and the corresponding data for urban areas in Tables (79) to (82). Salt includes common salt, sea salt, rock salt and other salts. Sugar includes cane sugar, gur (unrefined sugar) and sugar candy.

4.17. The values of consumption of other food items are shown in Tables (49), (50), (82) and (84) for rural and urban areas respectively. Other food items cover pulses and products, vegetables, fruits and nuts, spices, beverages and refreshments.

4.18. The values of consumption of total food items for rural and urban areas are shown in Tables (51), (52), (81) and (82) respectively. The food total comprises of (1) foodgrains, (2) milk and milk products, (3) edible oil, (4) meat, egg and fish, (5) sugar , (6) salt and (7) other food items.

4.19. Consumer expenditure on non-food items, namely, clothing, fuel and light, rent, taxes and miscellaneous items for rural areas are given in Tables (53) to (62) and for the urban areas in Tables (87) to (96). Per household and per capita estimates for the items are presented in alternate tables. Clothing includes cotton (mill-made, handloom inclusive of khadi), silk, wool and, bedding and upholstery. Fuel and light includes coal, firewood, electricity, gas, matches and other igniting agents. Rent covers rents on residential houses, residential land and other consumer goods. Taxes include local and other taxes. Miscellaneous items cover pan, tobacco and products, drugs and intoxicants, amusements and sports, education, medicine, toilets, sundry goods, furniture, services, conveyances and ceremonials etc.

4.20. Tables (63), (67), (97) and (98) show the totals of consumer expenditure of all the non-food items for the rural and urban areas.

4.21. Tables (65), (66), (99) and (100) show the total expenditure on all items i.e., total consumer expenditure on all food and non-food items, for the rural and urban areas respectively.

4.22. Indices of value of consumption per household on items like foodgrains, food items, non-food items and total consumer expenditure are presented in Tables (67) to (70) for the rural sector and in Tables (101) to (104) for the urban sector. The indices have been worked out relative to the figure for all-India as base. For the rural sector, these are given by zones and by expenditure levels and for the urban sector, by size classes of towns and by expenditure levels.

4.23. The state tables have been presented only for the rural sector according to the following categories :

(1) distribution of sample households, percentage distribution of estimated number of households (or persons) and the estimated average household size by states and by monthly household expenditure levels ... Tables (105–108)

(2) consumer expenditure per person or per household in rupees by items of consumption separately for each state ... ... Tables (109–125)

(3) the pattern of consumer expenditure as percentage to total consumer expenditure by items of consumption and by states ... ... Table (126)

(4) consumer expenditure per person or per household in rupees by states separately for each item ... Tables (127–141)

(5) Indices of consumer expenditure on foodgrains, all food items, all non-food items and all items by states ... Tables (142–145)

4.24. The arrangement of the state tables are exactly similar to the zonal tables. The description of tables, as given for earlier tables has not been repeated; here states should generally be understood where there is a reference for the zones.

APPENDIX II

SAMPLING DESIGN OF THE FOURTH ROUND OF SURVEY

DESIGN FOR RURAL AREAS

01.1. The sampling design for rural areas in the fourth round of the survey is much different from that of the first three rounds.

01.2. For the survey of the rural areas, India was first of all suitably divided into a large number of strata. In each stratum a two-stage sampling design, with villages as the first stage units and households as the second stage units, was employed in the first three rounds of the survey. In the fourth round, however, a three-stage sampling design was introduced, with tehsils as the first stage units, villages as the second stage units, and the households as the third stage units.

01.3. The formation of the strata was done in the following way. India was first divided into 'natural divisions' as defined by the Registrar General, Ministry of Home Affairs, Government of India. The sample tehsils were allocated to the population zones (i.e., states or state groups) in proportion to the total consumer expenditure of the zones (obtained in the first round of NSS) and then re-allocated to the 'natural divisions' in proportion to their population. Within a 'natural division' the tehsils were stratified according to the density of population and the number of strata to be formed was taken to be half the number of tehsils allocated. The limits of these strata within a 'natural division' were so adjusted that for each stratum the total population was approximately equal.

01.4. Thus a stratum within a 'natural division' was on the basis of density of population (with necessary modifications) with the requirement that the total population of each stratum within the division would be equal. From each stratum so formed, 2 sample tehsils were selected with probability proportional to area or populations of the tehsils and with replacement and from each sample tehsil, 2 sample villages were like-wise selected. Finally, within each selected village, a proportion of households were chosen systematically with a random start for collection of information.

01.5. The estimates are first of all obtained for each individual stratum and are then combined to give the estimates for a state or a zone or for total rural areas of India. For each item, a pair of independent stratum estimates, based on two independent and interpenetrating sub-samples, have been provided in the report for the first time. In addition, the estimate obtained by combining all the sample units have also been provided.

DESIGN FOR URBAN AREAS

01.6. As in the third round of the survey, the sampling in urban areas was done in three stages. Besides the four big cities of Calcutta, Bombay, Delhi and Madras which were included in the survey as separate strata, all other cities and towns

in India were grouped into three strata by their population sizes e.g., (i) towns with population below 15,000, (ii) towns with population from 15,000 to below 50,000, (iii) towns and cities with population 50,000 and above. In the first stage of sampling, the sample towns were selected from each stratum with probability proportional to population and with replacement. In the second stage, sample blocks were selected from each sample town or city, with probability proportional to the number of households contained in each block and with replacement. The number of sample blocks to be selected depended on the population of the sample town, the blocks being the enumeration blocks of 1951 Population Census. In the third stage, sample households were selected systematically with a random start for investigation from each sample block.

01.7. As in rural areas, the estimates in urban areas were also obtained separately from two independent and interpenetrating sub-samples.

APPENDIX III

FACSIMILE OF THE SCHEDULES OF INVESTIGATION

RURAL* / **URBAN** **ORIGINAL*** / **DUPLICATE**
